

Riken International Symposium on Data Assimilation 2017

Alexandre Fournier
Institut de Physique du Globe de Paris
1, rue Jussieu
75238 Paris cedex 05, France
Telephone : +33 1 8395 7475
E-mail : fournier@ipgp.fr

Education

- 2012: Habilitation thesis, Geophysics, Université Paris-Diderot
- 2003: Ph.D., Geosciences, Princeton University
- 1998: M.Sc., Geophysics, Institut de Physique du Globe de Paris
- 1996: B.Sc., Physics, École Normale Supérieure de Lyon

Employment

- Since 2014: Professor of Geophysics, Institut de Physique du Globe de Paris
- 2008-2012: Associate professor of Geophysics, Institut de Physique du Globe de Paris
- 2004-2008: Associate professor of Geophysics, Université Joseph-Fourier, Grenoble
- 2003-2004: Research and teaching assistant, Institut de Physique du Globe de Paris

Current research activities

The main goal of my research is to help understand earth's core dynamics, which is indirectly reflected by the spatial and temporal variability of the earth's magnetic field. I mean at contributing to the understanding of the physical processes responsible for this variability, through proper analysis of magnetic observations and experimental results. A consistent relationship between observations and dynamical models of the core can be set up in the framework of data assimilation. I have been the PI of the [AVSGeomag](#) research program (funded by the Agence Nationale de la Recherche for years 2011–2016) whose goal was precisely to build assimilation tools for the assimilation of geomagnetic observations into dynamical models of the Earth's core. Since 2013, I have also collaborated with mantle dynamicists (resp. solar physicists) to investigate the possibility to use data assimilation to analyze observations connected with mantle convection (resp. solar activity).

Publications that may be of interest to RISDA 2017 attendees
